What is AI Functions?

The Facts of Security

The realization of AI (Artificial Intelligence) functions in security mainly relies on computer vision to achieve understanding and recognition of images, speech and text.

AI functions are mainly affected by the three factors of algorithms, hashrate, and big data.

Common AI Functions in Security

1 Human Analysis

Face Recognition, Human Recognition, etc.

2 Vehicle Analysis

License Plate Recognition, Vehicle Identification, etc.

3 Behavior Analysis

Target Tracking Monitoring, Abnormal Behavior Analysis, etc.

4 Image Analysis

Video Quality Diagnostics, Video Summary Analysis, etc.
